

# Ashmita Dua

+1 (408) 598-7970 / [duashmita@gmail.com](mailto:duashmita@gmail.com) / [LinkedIn](#) / [Github](#) / Santa Cruz, California

---

## Education

University of California, Santa Cruz | Undergraduate  
B.Sc. Computer Science: Game Design

Sept, 2024 - June, 2028

---

## Skills and Portfolios

- |                        |                            |                             |
|------------------------|----------------------------|-----------------------------|
| • Proficient in Python | • Neural Networks; Pytorch | • LLMs/ RAG                 |
| • SQL                  | • AI/ML projects           | • Fluent in English & Hindi |
| • HTML/CSS             | • Graphic Designing        | • Familiar with German      |
- 

## Experience

Augmented Design Lab  
Undergraduate Researcher

September, 2025 - Present

- Auditing the Lab through a 10-week independent study focused on generating game levels through AI, LLMs.
- Working with Procedural content generation, through hierarchical wave function collapse.

Artificial Intelligence Explainability Accountability Lab  
Auditor

April, 2025 - Present

- Auditing the Lab through a 10-week independent study focused on LLM safety, logic translation, and inconsistency detection.
- Contributing to the LLM Logic project by setting up local environments (LLM API, SWI-Prolog).
- Building a knowledge base and curating UCSC-specific questions.

Undergraduate Admissions Office, UCSC  
Website Designer

January, 2025 - Present

- Designed, edited, and maintained the company's website, ensuring a user-friendly interface and up-to-date content.
- Managed and updated digital records, organizing and maintaining structured data for improved accessibility and efficiency.

iHub DivyaSampark, IIT Roorkee  
Student Intern

July, 2024 - September, 2024

- Developed and deployed machine learning models using Python, PyTorch, and Keras, focusing on real-world problems.
  - Applied data preprocessing techniques, deep learning algorithms (CNNs, NLP), and supervised/unsupervised learning models.
  - Collaborated on team-based projects to build machine learning pipelines and worked with real-world datasets across industries.
- 

## Projects

### Woven Mood-Based Storytelling LLM

- Developed Woven, a mood-based LLM generating personalized narratives by mapping users' current and target emotions.
- Designed branching prompts driven by emotion and user choices to gently guide mood transitions through the story.
- Implemented session memory and summarization to handle long contexts and ensure coherent multi-turn storytelling.

### ASL Decoder CNN Model

- Designed a CNN-based system for real-time American Sign Language (ASL) recognition using live video inputs.
- Applied **data augmentation** and optimized CNN architecture to enhance accuracy.
