SOLVE THE PROBLEM TO
PROCEED>

A pixel art landscape featuring a light blue sky with two white, pixelated mountains. The ground is a solid black line with a row of small, dark gray, pixelated bushes or rocks. On the left, a black pixelated dinosaur stands facing right. On the right, a black pixelated cactus stands. The word 'APPROACH' is written in large, black, pixelated capital letters in the upper center.

HUMAN: make a maze here

AI: I've placed a 10x5 grid of platform blocks (Tile ID 5) in the selected region, from global coordinates [19, 8] to [28, 12] on the 'Ground_Layer'. This will form the basic structure of your maze. What kind of maze would you like to create within this area? Do you have any specific pathways or features in mind?

3. Clear a path for the entrance and exit. 4. Place internal walls to create the maze structure, ensuring a solvable path from the entrance to the exit. I've created a maze in the selected area! You'll find the entrance at (6,6) and the exit at (21,11). I've used platform blocks (Tile ID 5) to construct the walls of the maze. Let me know if you'd like to add any collectables or enemies inside!

HUMAN: add coins and enemies

AI: The selected rectangular region is from global coordinates [6, 5] to [21, 12], which is a 16x8 area. This area contains the maze I previously created using platform blocks (Tile ID 5). I will now add coins and enemies to the maze. I'll place coins (Tile ID 2) along the paths and Slimes in various locations within the maze to add some challenge. I've added coins (Tile ID 2) throughout the maze and placed several Slimes at different locations to make it more challenging! Would you like to add anything else to your maze, or perhaps move on to another section of your map?
